SIZE AND SHAPES OF PAVERS

**60 millimetre (mm) –
Residential paving (standard load)**

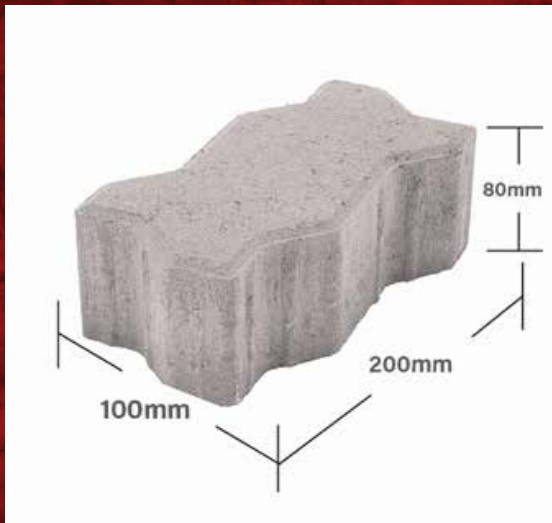

Block Paver

These are designed for the residential household as well as commercial spaces with a standard load. This would work for homes, schools, office parks, churches, hospitals and similar standard load places.

**80 millimetre (mm) –
Industrial (heavy duty paving)**

This brick is designed for heavy duty terrain. This is for public roads, haulage truck parking and busy public walkways

Building happiness
for posterity

Multiple shapes

PATTERNS AND DESIGNS

Below are illustrative patterns for block paving. Various colours and block shapes can be mixed to create unique and custom patterns.

Building happiness, for prosperity

3D PAVERS

SLAB PAVING

PAVING INFORMATION

Use of polyethene sheeting plastic

Polythene plastic sheeting must be used to prevent weeds from growing in-between the blocks overtime. We discourage use of herbicides as this introduces chemicals into the ground. The beauty of block paving is that it can be removed over time and still allow the space to be used for vegetation.

Use of quarry dust

Pavers are laid in top of neatly spread quarry on compacted ground. After laying the pavers, a thin layer of quarry dust is also spread on top of the paving and gently brushed to cover the interlocking spaces and ensure a compact finish. River sand can be used in the absence of quarry dust.
